

osCommerce Point of Sale

Price: \$189.00

Product description:

Point of Sale (POS) for osCommerce is a virtual sales terminal which allows to handle orders from additional sales channels beside your online store. With the help of Point of Sale you (or your sales staff) will be able to take orders by phone or personally from your customer. All information will be added to your store database as regular orders.

What Point of Sale (POS) for osCommerce can offer you:

1.

Actual Point of Purchase

Handle customer phone orders: create an order, charge money, send/print receipt or invoice, further order processing.

2.

Notify Customers via email

Let the customers know when the status of their order is changed. Order notification, status change notification, receipt and invoice can be emailed upon customer request.

3.

Sales Process Automation

You won't need to use your inconvenient regular store administration section. POS allows to create orders, charge money, proceed with further order actions on ONE page.

4.

Increase Amount of Sales

POS software allows you to register several sales managers, so few people can sell products. Point of Sale gives them the ability to work simultaneously or in turns.

The Advantages of Point of Sale (POS) module are numerous. To name a few:

1.

Additional Sales Channel

Get more customers and increase your sales volumes providing high-quality service to your customers personally or by phone

2.

Easy-to-Use

User-friendly interface helps to start working with the module in no time. It is much more convenient for you to use comparing to your store administration section - you get everything you need at one place

3.

Order List Management

Ability to change order status (pending, processing, delivered etc), view order details and print the receipt or invoice upon customer's request

4.

Latest Innovative Technologies Trends

Software has been developed using latest innovative technologies trends (such as ExtJS) - to make interaction with the application convenient for you. POS gives an impression of regular desktop application use.

5.

Cost-Effective Solution

This module is a perfect tool for your sales manager helping him work much more effectively. Get perfect correlation of price and quality combined in this software.

Point of Sale for osCommerce supports barcode readers and search by ALL product fields, including product_model and custom ones you probably introduced for storing bar code.

Point of Sale for osCommerce software is a must-have sales tool for your sales staff - it helps to automate their routine tasks and increase your volume of sales!
